

SSS

Stop Slop Squatting

Temporal package intelligence that stops unsafe agent installs before execution

EXASOL • PYPI + NPM • SELF HOSTED

A real package can still carry a dangerous history

MODEL

recommends a
package
that does not exist

ATTACKER

registers the same
plausible name
later

AGENT

finds a valid
registry
entry and installs it

A registry lookup answers whether the name exists now. SSS remembers whether trusted systems invented it before it existed.

The timeline changes the decision

03

404 proves absence. 401, 403, 429, 5xx, DNS and TLS failures remain UNKNOWN.

The agent is the primary product surface

04

PROTECTED AGENT

```
$ pnpm add @sss-demo/reserved-synthetic@1.0.0  
SSS BLOCK — @sss-demo/reserved-synthetic@1.0.0  
Absence confidence: 100    Target attractiveness: 95  
Package policy risk: 75    Exit code: 23  
Installation was not started.
```

ZERO package-manager children

Human intervention created

Human control stays exact and temporary

KEEP BLOCKED

Default when the operator does nothing

ALLOW ONCE

One package, version, registry and artifact hash

RETRY

Atomic consume. Changed fields or replay block.

Grant claims

package • version • registry • artifact SHA-256 • project • expiry • nonce • policy

Exasol is the memory and the operating ledger

06

INTELLIGENCE

**Immutable
observations
Registry checks
Recurrence and
transitions**

POLICY

**Versioned evidence
reads
Deterministic scores
Decision attestations**

OPERATIONS

**Attempts and
interventions
Single-use approvals
Worker cursors and
readiness**

Ordered migrations • parameterized queries • backup and restore

The fixed rehearsal makes the claim testable

07

46

verified
recommendations

3

model configurations

8

client pseudonyms

5

public failed
references

11

observation days

100

absence

95

attractiveness

75

policy risk

exit 23

no child

Single organization deployment

08

PROTECTED ZONE

Local coding agent
Package-manager
shims
No direct registry route
No Docker socket

CONTROL PLANE

Guard API
Private Radar
Operator
approvals
Registry gateway

DATA

Exasol Personal
Approved model
endpoint
Frozen registry
origins

Zero cost local qualification uses Exasol Docker Edition. Cloud infrastructure remains optional and billable.

Package installs need memory

SSS remembers the absence, recognizes the transition and stops the agent before execution.
